

GREENHOUSE HEATER PALMA 1.5 kW

Powerful, energy-efficient, compact and safe – Bio Green’s new electronic fan heater, Palma, is a fantastic addition to your greenhouse, with its timeless design, stainless steel construction and solid build quality. Adaptable and efficient, the Palma is splash-proof and in addition to greenhouse use, it is also safe to use in damper rooms, like garages, basements, storage rooms, outbuildings and workshops – it can even be used as an emergency heater if required!

Perfect for smaller greenhouses where space is at a premium, the powerful Palma features 1.5 kW of heating power, and can circulate 163 cubic metres per hour, with temperature controlled by a single, easy to use dial. If required, the Palma can also be used to maintain temperatures below 0°C, via the addition of the optional digital thermostat (Palma digital version only) – making it suitable for the cultivation of plants that sprout in the frost.

PALMA 1.5 kW MANUEL	
Maximum heat output:	1500 W
Fan power:	30 W
Power connection	110VAC ±10%, 50/60Hz
Pin	3pin - earthed
Maximum power input:	10 A
Achieved temperature:	32 to 185 °F
Air circulation:	5756,3 cft (163 m³/h)
Dimension:	11 x 8 x 12.5"
Order-No.	PAL 2.0/US
EAN-/Barcode	5055320022763
PALMA 1.5 kW DIGITAL (INCL. THERMOSTAT TER2)	
Order-No.	PAL 2.0/USDT
EAN-/Barcode	5055320022787
