

Pool and Hot Tub Enclosures

Cross Country Greenhouses proudly uses high quality structural aluminum and stainless steel fasteners that are adaptable for any project.

Want to enclose your hot tub, swim spa, or even your swimming pool? Our greenhouses are multi-functional and can be modified to suit your property.

Think about adding plants to the area. Many plants thrive with the added moisture and humidity!

Consider a polycarbonate roof to add built in shading and overall energy efficiency. And don't forget about ventilation – it is key to an enjoyable environment.

THINGS TO CONSIDER:

Often, pool covers and enclosures are attached to homes for ease of access. It is important to think about available height on the attaching wall to ensure that there is enough head room for walking near the sidewall.

Does your hot tub or swim spa have a large cover? Some have a large attached cover that needs to flip open. Ensure that there is enough sidewall and rood height to open your cover.

Ventilation is very important! Our structures are intended to perform in situations with high humidity, condensation, and direct exposure to water with out corrosion, rusting or seal failure.

IMPORTANT:

Although our structure will stand up to this intended use, condensation needs to be addressed for personal comfort, safety and the longevity of your inside furnishings. We always recommend consulting with an HVAC Consulting Engineer to discuss what condensation will be expected for your climate and how to manage it. Our systems are highly adaptable and we can incorporate any necessary HVAC equipment. Please refer to our unbeatable warranty for information on life span of the materials we use.

You can rest assured our structure will not degrade over time. We help you create the right design to match your needs and choose the type of covering – glass or polycarbonate - to match your budget and meet your building codes for safety. Call our team to discuss your plans today!
